

**FLUID EJECTION DEVICE HAVING A SUBSTRATE TO FILTER
FLUID AND METHOD OF MANUFACTURE**

5

ABSTRACT

A fluid ejection device is described. One exemplary embodiment includes a substrate having a first surface and a second surface, the substrate defines a fluid supply conduit between the first surface and the second surface. This particular fluid ejecting device also includes a generally elastic
10 filter layer formed over the first surface where the filter layer does not form sidewalls defining a fluid channel of the fluid ejection device.
